## **RE8040-BE34**

High productivity RO element with thick feed spacer for brackish water

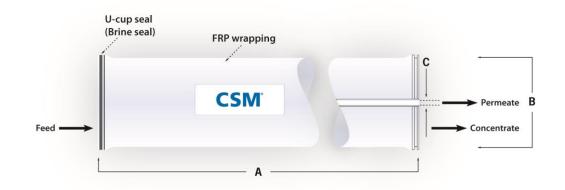

### SPECIFICATIONS:

| General<br>Features | Permeate flow rate:      | 10,500 GPD (39.7 m³/day)                   |  |
|---------------------|--------------------------|--|--|
|                     | Nominal salt rejection:  | 99.7%                                      |  |
|                     | Effective membrane area: | 400 ft <sup>2</sup> (37.2 m <sup>2</sup> ) |  |
|                     | Feed spacer thickness:   | 34 mil                                     |  |
|                     |                          |  |  |

- 1. The stated product performance is based on data taken after 30 minutes of operation at the following test conditions:
  - 2,000 mg/L NaCl solution at 225 psig (1.5 MPa) applied pressure
  - I5% recovery
  - 77 ºF (25 ºC)
  - pH 6.5–7.0
- 2. Minimum salt rejection is 99.4%.
- 3. Permeate flow rate for each element may vary but will be no more than 15%.
- 4. All elements are vacuum sealed in a polyethylene bag containing 1.0% SBS (sodium bisulfite) solution and individually packaged in a cardboard box.

Membrane type: Membrane material: Element configuration: Thin-Film Composite Polyamide (PA) Spiral-Wound, FRP Wrapping

|                                  | • Well water (SDI < 3)  | 13–17 gfd                             |  |  |
|                                  | · RO permeate (SDI < I)   | 21–30 gfd                             |  |  |
| Saturation Limits                | · Langlier Saturation Index (LSI)   | <+1.5                                 |  |  |
| $(Using Antiscalants)^{\dagger}$ | • Stiff and Davis Saturation Index (SDSI)   | <+0.5                                 |  |  |
|                                  | · CaSO4   | 230% saturation                       |  |  |
|                                  | · SrSO4   | 800% saturation                       |  |  |
|                                  | · BaSO4   | 6.000% saturation                     |  |  |
|                                  | · SiO <sub>2</sub>  | 100% saturation                       |  |  |
|                                  | <sup>†</sup> The above saturation limits are typically accepted by proprietary antiscalant<br>manufacturers. It is the user's responsibility to ensure proper chemical(s) and<br>concentration are dosed ahead of the membrane system to prevent scale<br>formation anywhere within the membrane system. Membrane elements fouled<br>or damaged due to scale formation are not covered by the limited warranty. |                                       |  |  |

#### **GENERAL HANDLING PROCEDURES**

- Elements contained in the boxes must be kept dry at room temperature (7–32°C; 40–95°F) and should not be stored in direct sunlight. If the polyethylene bag is damaged, a new preservative solution (sodium bisulfite) must be added and air-tight sealed to prevent drying and biological growth.
- Permeate from the first hour of operation should be discarded to flush out the preservative solution.
- Elements should be immersed in a preservative solution during storage, shipping and system shutdowns to prevent biological growth and freezing. The standard storage solution contains 1% by weight sodium bisulfite or sodium metabisulfite (food grade). For short term storage (i.e. one week or less) 1% by weight sodium metabisulfite solution is adequate for preventing biological growth.
- Avoid excessive pressure and flow spikes.
- Only use chemicals compatible with the membrane elements and components. Use of such chemicals may void the element limited warranty.
- Permeate pressure must always be equal or less than the feed/concentrate pressure. Damage caused by permeate back pressure voids the element limited warranty.

• Keep elements moist at all times after initial wetting.
